## **myFC Unveils the Excess Charger - the First in its Excess Line**

**STOCKHOLM, Sweden. February 29, 2008 -- On Wednesday, myFC unveiled its highly anticipated Excess Charger at this year's 4<sup>th</sup> International Hydrogen and Fuel Cell Expo (FC Expo 2008), held in Tokyo, Japan.**

The Excess Charger is the pioneer product in myFC's Excess Line, and the first product stemming from the collaboration between myFC and its Nordic Consortium. The new and improved charger incorporates fuel cells with a world leading power density, based on myFC's patent-protected FuelCellSticker™ technology, powered by an integrated and easily replaceable metal-hydride fuel cartridge. The first in the Excess line has been designed specifically to cater to portable electronics demanding power levels of up to 3W.

myFC worked in close co-operation with its Nordic Consortium, comprising of leading industrial designers and manufacturers, to optimize the end user experience, balancing technical proficiency, functionality and aesthetic appeal of the Excess Charger. The charger is currently undergoing extensive tests.

"It has been a very exciting process," said Björn Westerholm, CEO of myFC AB. "The immense expertise of the Nordic Consortium has been invaluable in our efforts to bring the product to the market and the result has been very promising. I am confident that with this good team, we can look forward to more successful integration prospects."

"The realization of the Excess Charger is an important achievement for myFC," commented Anders Lundblad, CTO of myFC AB. "It verifies that our FuelCellSticker™ technology can deliver excellent performance not only in an independent fuel cell module, but also when enclosed in real products."

The International Hydrogen and Fuel Cell Expo is the world's largest international exhibition, involving over 50 countries in 2007. The 2008 Fuel Cell Expo featured upwards of 400 exhibitors showcasing the latest products and advancements in the Hydrogen and Fuel Cell industries.

myFC AB is a privately owned Swedish company headquartered in Stockholm. myFC develops FuelCellPlatforms for portable electronic applications based on the patent-protected, FuelCellSticker™ technology.

myFC's FuelCellSticker™ technology offers flexibility in architecture, allowing for customizable solutions. Optimized for high power density, it can meet the growing power and volume demands for portable electronics. Simplicity and efficiency in production methods also leads to a low manufacturing cost. The resultant fuel cells' small and flexible design enhances their seamless integration into portable electronics.

myFC's technology, fashioned into a revolutionary portable charger, will provide power anytime, anywhere!
