

myFC's CTO and Founder, Anders Lundblad, to Present at Small Fuel Cells for Portable Applications Conference

Anders Lundblad, CTO and founder of myFC, will be presenting on myFC's revolutionary technology – an “Easy-To-Replace Passive FuelCellSticker™”. This year's conference will take place in Miami, Florida, from March 7 -9.

The myFC FuelCellSticker™ is uniquely designed with high power density - over 300 mW/cm², meeting the high power and growing volume needs for portable electronics. The simple FuelCellSticker™ is easy to manufacture, leading to low cost, which makes it suitable for volume production. Another benefit of the FuelCellSticker™ is its flexibility in design which leads to improved performance under the challenging demands from portable electronics such as mobile phones.

Anders Lundblad will present performance data, life-time data, and manufacturing cost forecasts. He will also discuss selected early application markets.

“I think it is fantastic that myFC has been selected to present at Small Fuel Cells 2007. This is a good opportunity for myFC to share the benefits of our FuelCellSticker™ with the micro fuel cell community and to potential customers”, says Anders Lundblad.

Small Fuel Cells for Portable Applications has an impressive lineup of speakers from around the world, and industry leaders exhibiting the latest technologies. It is the primary source of information for end users, developers, and manufacturers of portable power devices. It is currently in its 9th year running.

myFC AB is a privately owned Swedish company headquartered in Stockholm. myFC develops fuel cell platforms for portable electronics applications based on the patent-protected, FuelCellSticker™ technology.

myFC's vision is to boost the mobility of portable electronics such as mobile phones, MP3 players and laptops by eliminating the power cord. myFC's technology, fashioned into a revolutionary portable charger, will provide power anytime, anywhere!
